

### **Features of the system**

1. Add, modify, or delete courses.
2. Add, modify, or delete students. Each student should have a unique ID. Deleting a student should remove that record from any courses he/she is taking.
3. Add or remove students from a particular course. Also it is possible that a student may be taking more than one course.
4. Record attendance on a specific day for a particular course. This module also allows the user to change attendance for a given day. (It could be a checkbox way but I made it using combo boxes only)
5. Show complete attendance for all days for a particular course. That is, a chart of each student in the course and which days he/she was present and absent.
6. Show a line graph or histogram of attendance for a particular course. This does not show detail, just how many students were present or absent on a given day.
